

A Highly Advanced System for The Emergency Operations Centre

The guiding principle for Crisis Commander is true ease of use for end users. The system features provide a highly advanced framework and communications infrastructure to enable notification, mobilisation, contingency plan execution and effective teamwork in the Emergency Operations Centre and at the scene of the crisis.

Used in Major Disasters Worldwide

Crisis Commander was a critical component of response efforts during multiple disasters in the recent past.

The system was used in the aftermath of the 'Asian Tsunami Disaster', during '7/7 London Bombings' and for response and recovery from factory fires, power outages, floods, IT-disasters and a wide range of other incidents in the United States, Europe and Asia. Crisis Commander has also been used innumerable times for training purposes.

The Easy to Use Alternative

Crisis Commander has been designed to be very easy to use at time of crisis. This not only makes the system more useful and effective, but also lowers training and rollout costs.
